

## **Essay On Environmental Pollution in 250 Words**

### **Pollution Introduction**

Science has brought many advantages to human beings but also many disadvantages. Pollution is a curse that comes from science and that most people have to endure.

Pollution is defined as anything that causes our environment to become dirty. It poisons our land, water, and air. It has increased throughout human progress, especially during the past century. The result is pollution, lack of clean air, lack of clean water, and at the same time, a lack of clean food. Pollution causes diseases.

### **What is pollution and its effect?**

Pollution is the manifestation of any foreign substance in something. Usually, pollution refers to the contamination of the natural resources by various pollutants caused by human activities in multiple ways.

The environment consists of three main components: land, air, and water. Thus, environmental pollution is the contamination of land, air, and water due to many dirty substances. All of these pollutants put a person's health and life in grave danger, and man needs to breathe clean air as well. Many dangerous diseases spread to crops because of the contaminated water.

The leading cause is the absence of rain, the hot and cold circuits are not working correctly, floods, droughts, etc. They are caused by pollution, which also contributes to the degradation of the natural ecosystem.

### **What causes of pollution?**

Today, the significant pollution sources are; industries, burning of fossil fuels, garbage, sewage, smoke, etc. Therefore, any pollution threatens life on our planet.

Smoke from factories and black smoke from cars spread throughout the day spread out that breathing healthy air is problematic in large cities. These diseases are more common when the population is high, trees are scarce, and the surrounding environment is cramped.

Water pollution from factories and rivers, and canals causes dangerous water pollution. During floods, polluted water mixes with rivers and streams, leading to many diseases. Drinking contaminated water can result in many illnesses such as hemorrhoids, abdominal pain, vomiting, diarrhea, etc.

Some diseases can be fatal, such as numbness or the pressure they create. Most of these noises can be heard around the city and by people suffering from these diseases. As a result, things such as vehicle smoke, noises emitted by speakers, etc., worsen the climate, as well as causing a lot of human diseases.

### **How we can reduce pollution essay?**

To avoid different kinds of pollution, there should be more trees planted and separate campaigns done. Trees should also line the roads. With such a large population, we must make our home a beautiful and airy environment with small trees and plants surrounding our house. Factories should be built away from populated areas to avoid diseases and prevent them.

## **Conclusion**

Environmental pollution is one of the most severe problems caused by human activities that we need to address to see a tomorrow and guarantee our descendants' health. We must always keep in mind that pollution affects us all, so we must all do our part to restore ecological balance to this beautiful place we call home.

Let people know what you know and encourage them to protest local polluters together. Learn more about significant polluters in your area and stop pollution. People need to be educated about environmental pollution and how it affects the environment. Let's protect the water, air, and soil we use to grow our food.
